TRIMBLE MEASURE SERVICE
FIELD SOFTWARE

STREAMLINE FIELD INSPECTIONS AND REPORTING WITH PRECISION

Trimble® Measure Service software enhances construction workflows by connecting field data with office systems, eliminating manual data entry and reducing errors. Integrated with Trimble Access and Trimble SiteVision, it enables easy data collection, processing, and sharing with accuracy.

By providing real-time measurements, it speeds up inspections and reporting, especially when used with Infotech Mobile Inspector. Inspectors can send data directly to daily reports and payment documentation, ensuring fast and reliable results.

Trimble SiteVision's augmented reality (AR) further improves inspections by visualizing data in real time, ensuring accuracy and reducing errors. Trimble Measure Service streamlines workflows, offering faster turnaround times and better communication between field and office teams.

Visit our store or contact our dedicated customer service team for more details.

KEY FEATURES

Efficient Data Sync & Reporting
Automate DWR with Infotech Mobile Inspector and sync field data to office systems.

Faster Reporting & Real-Time Access
Quickly collect and access accurate data for faster results.

Augmented Reality Visualization
Use Trimble SiteVision for real-time data visualization.

Device & Software Flexibility
Works with Trimble Access on Android & Windows, integrates with AASHTOWare Project and Appia.

Streamlined Inspections
Replace paper workflows and capture/share data remotely with HPS2 handle.

Increased Efficiency
Enhance collaboration between field and office teams.
